

The purpose of this mailer is to help you make a comparison between Orange County Power Authority (OCPA) and Southern California Edison (SCE) rates and see the renewable energy mix of each to decide which service and rate works for you. The chart below illustrates the estimated electricity costs for a typical residential customer with an average monthly energy usage of 569 kilowatt hours (kWh). This comparison is based on OCPA rates approved by its Board of Directors and effective as of June 10, 2023. SCE rate options are based on rates effective June 1, 2023. Both OCPA and SCE's rates are subject to change.

Monthly Usage: 569 kWh

SCE rates are current as of June 1, 2023. OCPA rates are current as of June 10, 2023.

This rate comparison represents similar comparisons for DSDP, DSDPO, DE, DESDP, DESDPO, DM, DMS1, DMS2, DMS3

All of OCPA's rate products are open to all customers. Generation Rate reflects the cost of producing or purchasing electricity to power your residence. This rate depends on usage and will vary depending on your service provider and rate plan. SCE Delivery Rate is a charge assessed by SCE to deliver electricity to your residence. Surcharges represent the Cost Responsibility Surcharge (CRS) and Franchise Fee (FF) that are applicable to Community Choice Aggregation (CCA) customers.

Unspecified power is electricity that has been purchased through open market transactions and is not traceable to a specific generation source. Unspecified sources of power are typically a mix of all resource types, and may include renewables.

The CRS is a group of four surcharges associated with power purchases made on behalf of customers prior to a customer's switch to a CCA as well as non-passable charges related to wildfire fund and bond costs. The FF recovers taxes owed to a city in exchange for allowing SCE to utilize electrical distribution lines throughout the property of the city. SCE acts as the collection agency for the FF surcharge which is levied by cities and counties for all customers.
